1. MANDATE OF THE ICT DIVISION

- 1.1 The Information and Communications Technology (ICT) Division has the mandate to deliver services, support and maintain ICT infrastructure, for the Municipality to realise its mandate.

2. OBJECTIVE OF THE POLICY

- 2.1 Changes to information resources shall be managed and executed according to a formal change management process. The management process shall ensure that changes proposed are reviewed, authorised, tested, implemented, and released in a controlled manner; and that the status of each proposed change is monitored.

3. APPLICABILITY OF THE POLICY

- 3.1 This policy applies to all employees of the Municipality, including Contractors and Consultants, who use ICT services and assets.

4. ACRONYMS

COBIT	Control Objectives for Information Technology
ICT	Information and Communication Technology
ICTSC	Information and Communication Technology Steering Committee
ITIL	Information Technology Infrastructure Library

Regulation of Interception of Communications Act 70 of 2002
- i. State Information Technology Act 88 of 1998.

6. PRINCIPLES

6.1 The purpose of this policy is to establish management direction and high-level objectives for change management. This policy will ensure the implementation of change management strategies to mitigate associated risks such as:

- a. Information being corrupted or destroyed
- b. Computer performance being disrupted or degraded
- c. Productivity losses being incurred
- c. Exposure to reputational risk

7. APPLICATION

7.1 Procedure

- a. The change management process shall be formally defined and documented, to control changes to all critical information resources (such as hardware, software, system documentation and operating procedures). This process shall include management responsibilities and procedures. Wherever practical, operational and application change management procedures should be integrated.
- b. At a minimum the change management process should include the following phases:

- i. Logged Change Requests
- ii. Identification, prioritisation and initiation of change
- iii. Proper authorisation of change
- iv. Requirements analysis
- v. Inter-dependency and compliance analysis
- vi. Impact Assessment
- vii. Change approach
- viii. Change testing
- ix. User acceptance testing and approval
- x. Implementation and release planning
- xi. Documentation
- xii. Change monitoring

- xiii. Defined responsibilities and authorities of all users and ICT personnel
- xiv. Emergency change classification parameters

7.2 Documented Change

- a. All change requests shall be logged whether approved or rejected on a standardised and central system. The approval of all change requests and the results thereof shall be documented.
- b. The ICT Unit shall maintain a documented audit trail, containing relevant information at all times. This should include change request documentation, change authorisation and the outcome of the change. No single person should be able to effect changes to production information systems without the approval of other authorised personnel.

7.3 Risk Management

- a. A risk assessment shall be performed for all changes and depending on the outcome, an impact assessment should be performed.
- b. The impact assessment shall include the potential effect on other information resources and potential cost implications. The impact assessment should, where applicable consider compliance with legislative requirements and standards.

7.4 Change Classification

- a. All change requests shall be prioritised in terms of benefits, urgency, effort required and potential impact on operations.

7.5 Testing

- a. Changes shall be tested in an isolated, controlled, and representative environment (where such an environment is feasible) prior to implementation to minimise the effect on the relevant business process, to assess its impact on operations and security and to verify that only intended and approved changes were made.

7.6 Changes Affecting Service Level Agreements

- a. The impact of change on existing Service Level Agreements (SLA) shall be considered. Where applicable, changes to the SLA shall be controlled through a formal change process which includes contractual amendments.

7.7 Version Control

- a. Any software change or update shall be controlled with version control. Older versions shall be archived.

7.8 Approval

- a. All changes shall be approved prior to implementation. Approval of changes shall be based on formal acceptance criteria i.e. the change request was done by an authorised user, the impact assessment was performed and proposed changes were tested.

7.9 Communicating Changes

- a. All users, significantly affected by a change, shall be notified of the change. The user representative shall sign-off on the change request form. Users shall be required to make submissions and comment prior to the acceptance of the change.

7.10 Implementation

- a. Implementation will only be undertaken after appropriate testing and approval by Change Committee. All major changes shall be treated as new system implementation and shall be established as a project. Major changes will be classified according to effort required to develop and implement said changes.

7.11 Fall Back

- a. Procedures for aborting and recovering from unsuccessful changes shall be documented. Should the outcome of a change be different to the expected result (as identified in the testing of the change), procedures and responsibilities shall be noted for the recovery and continuity of the affected areas. Fall back procedures shall be in place to ensure systems can revert back to what they were prior to implementation of changes.

7.12 Documentation

- a. Information resources documentation shall be updated on the completion of each change and old documentation shall be archived or disposed of as per the documentation and data retention policies.
- b. Information resources documentation is used for reference purposes in various scenarios i.e. further development of existing information resources as well as ensuring adequate knowledge transfer in the event of the original developer or development house being unavailable. It is therefore imperative that information resources documentation is complete, accurate and kept up to date with the latest changes. Policies and procedures, affected by software changes, shall be updated on completion of each change.

7.13 Disaster Recovery Plan (DRP)

- a. The Disaster Recovery Plan shall be updated with relevant changes, managed through the change control process. The Disaster Recovery Plan and continuity plans rely on the completeness, accuracy and availability of DRP documentation. DRP documentation is the road map used for minimal disruption in business continuity.

7.14 Emergency Changes

- a. Specific procedures to ensure the proper control, authorisation, and documentation of emergency changes shall be in place. Specific parameters will be defined as a standard for classifying changes as Emergency changes.

7.15 Change Monitoring

- a. All changes shall be monitored once they have been rolled-out to the production environment. Deviations from design specifications and test results will be documented and escalated to the solution owner for ratification.

8 ROLES AND RESPONSIBILITIES

8.1 The Change Committee shall:

- a. Ensure that the necessary information security controls are

implemented and complied with as per this policy

8.2 The ICT Supervisor shall:

- a. Approve and authorise change management procedures
- b. Ensure that all users are aware of the applicable policies, standards, procedures and guidelines for change management
- c. Ensure that policy, standards and procedural changes are communicated to applicable users and management
- d. Evaluate change request and potential risks and introduce counter measures to address these risks
- e. Facilitate and coordinate the necessary change management procedures within the Municipality
- f. Report and evaluate changes to change management policies and standards
- g. Coordinate the implementation of new or additional security controls for change management
- h. Review the effectiveness of change management strategy and implement remedial controls where deficits are identified
- i. Coordinate awareness strategies and rollouts to effectively communicate change management mitigation solutions

8.3 The ICT Manager shall:

- a. Establish and revise the information security strategy, policy and standards for change management
- b. Evaluate incidents and potential risks to the Municipality and facilitate the necessary counter measures to change management initiatives and evaluate such policies and standards

POLICY REVIEW

11.1 This policy shall be reviewed on an annual basis by the ICT Manager to:

- a. Determine if there have been changes in International, National or Internal references that may impact on this policy.
- b. Determine if there are improvements or changes in the ICT process that should be reflected in this policy.
